

Reagents and standards

THE ONLY ONES SPECIFICALLY DEVELOPED FOR OENOLOGY

ENOLUTION

SPECIFIC... AND ONGOING DEVELOPMENT

For over 30 years, TDI has developed a comprehensive range of specific reagents for each analyser. The wide spectrum of this product range makes it possible to cover virtually all the analytical needs of our customers. The R+D+i team works continuously to provide our customers with the latest technological advances and make the use of our reagents with our analysers more cost effective day after day.

Thanks to this activity many laboratories have requested us to develop some new parameters of interest for the sector: assimilable nitrogen, urea, potassium, total polyphenols, etc.

As pioneers of the liquid reagents for years, we offer ready-to-use reagents thus making routine analysis even easier. These kits allow a reduction of the reagent loss, analytical costs are reduced and profitability increased.

When purchasing reagents from TDI, our customers know that, in addition to a high quality product, they will benefit from a highly qualified technical support and a specialized comprehensive advice.

In order to simplify the reagent purchase planning of our customers, we deliver within 24 hours and guarantee year round supply.

RANGE OF REAGENTS AND STANDARDS FOR OENOLOGY:

Acetaldehyde, acetic acid, ascorbic acid, citric acid,
L-Lactic acid, L-Malic acid, gluconic acid, pyruvic acid,
glycerine, glucose, glucose + fructose, glucose + fructose + saccharose,
ammonia nitrogen, alpha-amino nitrogen, assimilable nitrogen,
tartaric acid, total acidity, anthocyanins, calcium, catechins, copper, colour,
iron, total polyphenols, potassium, free SO₂, total SO₂, urea etc.

All developed parameters are supplied to our customers **free of charge** .

If you have a specific requirement, please do not hesitate fo to contact us, we will help you.
